

MediPulse Power BI Dashboard Guide

Step-by-step instructions to build your healthcare operations dashboard after importing healthcare_cleaned.csv.

Project	MediPulse - Healthcare Operations Intelligence
Data source	data\cleaned\healthcare_cleaned.csv
Pages	Executive Overview, Operations, Financial Performance, Clinical Signals
Goal	Show patient volume, billing, length of stay, emergency demand, and abnormal test signals

1. Create Measures Correctly

Power BI measures must be created one by one. Do not paste all formulas in one measure box. Click Modeling > New measure, paste one formula, press Enter, then repeat.

If the table name is different in your Data panel, replace healthcare_cleaned with your exact table name. Use single quotes around the table name.

Total Admissions

```
Total Admissions = COUNTROWS('healthcare_cleaned')
```

Total Billing

```
Total Billing = SUM('healthcare_cleaned'[billing_amount])
```

Average Billing

```
Average Billing = AVERAGE('healthcare_cleaned'[billing_amount])
```

Average Length of Stay

```
Average Length of Stay = AVERAGE('healthcare_cleaned'[length_of_stay])
```

Emergency Admissions

```
Emergency Admissions =  
CALCULATE(  
COUNTROWS('healthcare_cleaned'),  
'healthcare_cleaned'[is_emergency] = TRUE()  
)
```

Emergency Admission Rate

```
Emergency Admission Rate =  
DIVIDE([Emergency Admissions], [Total Admissions])
```

Abnormal Results

```
Abnormal Results =  
CALCULATE(  
COUNTROWS('healthcare_cleaned'),  
'healthcare_cleaned'[is_abnormal_result] = TRUE()  
)
```

Abnormal Test Rate

```
Abnormal Test Rate =  
DIVIDE([Abnormal Results], [Total Admissions])
```

Repeat Visit Proxy Rate

```
Repeat Visit Proxy Rate =  
DIVIDE(  
CALCULATE(  
COUNTROWS('healthcare_cleaned'),  
'healthcare_cleaned'[is_repeat_visit_proxy] = TRUE()  
),  
[Total Admissions]  
)
```

2. Page 1 - Executive Overview

Create KPI Cards

- Go to Report view.
- Click Card visual.
- Drag Total Admissions into the card.
- Create cards for Total Billing, Average Billing, Average Length of Stay, Emergency Admission Rate, and Abnormal Test Rate.
- Format billing as Currency and rates as Percentage.

Create Charts

Visual	Fields	What it shows
Line chart	X-axis: admission_date, Y-axis: Total Admissions	Admissions trend
Bar chart	Y-axis: medical_condition, X-axis: Total Admissions	Top conditions
Bar chart	Y-axis: insurance_provider, X-axis: Total Billing	Billing by insurer
Donut chart	Legend: admission_type, Values: Total Admissions	Admission mix

Add slicers: admission_year, medical_condition, insurance_provider, admission_type.

3. Page 2 - Operations

- Add new page and rename it Operations.
- Bar chart: medical_condition by Average Length of Stay.
- Bar chart: hospital by Total Admissions. Use Top N filter = 25.
- Column chart: admission_weekday by Total Admissions.
- Donut chart: stay_category by Total Admissions.

4. Page 3 - Financial Performance

- Add new page and rename it Financial Performance.
- Bar chart: insurance_provider by Total Billing.
- Bar chart: medical_condition by Average Billing.
- Matrix: age_group by medical_condition with Average Billing and Average Length of Stay.
- Table: patient_name, hospital, insurance_provider, admission_date, billing_amount, negative_billing_flag.
- Filter the table to negative_billing_flag = True for data quality review.

5. Page 4 - Clinical Signals

- Add new page and rename it Clinical Signals.
- Bar chart: medical_condition by Abnormal Test Rate.
- Bar chart: admission_type by Abnormal Test Rate.
- Donut chart: medication by Total Admissions.
- Matrix: age_group by medical_condition with Total Admissions and Abnormal Test Rate.

6. Formatting Checklist

- Use blue for admissions, green for operations, orange for billing, and red only for flags.
- Turn on data labels for bar charts.
- Sort charts by highest value first.
- Format currency and percentage measures correctly.
- Keep slicers in the same place on every page.
- Use short titles: Admissions, Total Billing, Avg Stay, Emergency Rate.

7. Save Your Dashboard

- Save file as MediPulse_Healthcare_Operations_Dashboard.pbix inside the powerbi folder.
- Export screenshots of every page.
- Put screenshots inside the images folder.
- Add screenshots to README for portfolio presentation.

Common Errors And Fixes

Problem	Fix
Red underline under table name	Use exact table name from Data panel and wrap it in single quotes.
All measures are red	Create one measure at a time.
TRUE() error	If the column imported as text, use = "True" instead.
Date chart too detailed	Use date hierarchy or admission_year and admission_month.
Rates show decimals	Select measure and format as Percentage.
